

ParcelTools™

a smarter way to work for MicroStation Users

What the users are saying

"The auto-dimensioning feature is great!" That tool alone enabled us to recover the cost of the software on the first project."

"Producing lot yields used to be a real pain. Not anymore! ParcelTools does it in the blink of an eye."

"In just **half an hour** I completed a 500+ lot subdivision including creating the polygons, annotate length dimensions, calculate area and place at centroid, and place lot number at centroid. It would have taken a couple of days to do it without ParcelTools. My purchase order is on the way."

"Wicked."

"I used to dread the time the plans came back from the local authority. Even 'small' changes meant recalculating the lot yields and, often, renumbering lots. Now that we have ParcelTools it only takes minutes to make the changes and calculate the lot yields. Why did you take so long?"

"ParcelTools paid for itself on the first project. That's the fastest return on investment we've ever had on a CAD product."

"It's so easy to use and yet it saves so much time."

"Using ParcelTools means we no longer have to transfer files into another package to do the dimensions. No translation hassles. Fantastic."

"Our office uses MicroStation **SE** and **PowerDraft**. I thought we would never find new products we could use let alone something as powerful as ParcelTools. WOW!"

"Maintaining **tax maps** just got a whole lot easier. I wish you guys had done this years ago."

What are you waiting for?

It will take less than 30 minutes of your time to discover how much time and money **you** can save. It could be the best investment you make this year.
